E-START™ MICRO-V® BELTS

E-START™ INNOVATION LEADS THE WAY.

As the pace of automotive change continues to accelerate, Gates works with the world's major automotive manufacturers to develop more efficient engine systems to decrease CO₂ emissions.

Vehicle owners understand the principles of environmental sustainability and the effect on fuel prices. Gates is helping to develop technological solutions like Belt-driven Starter Generator (BSG) systems that increase fuel efficiency. These systems enable the vehicle to shut off when the vehicle comes to a complete stop, for instance at a red light, before instantly and seamlessly restarting when acceleration is desired. In addition, they provide an additional boost in power, recuperate energy during braking and serve as generators to maintain the charge of the battery. Special drive belts are required to achieve this, with Gates E-Start™ Micro-V® belt leading the way.
