# RELIABLE CONTROL AND DEPENDABILITY

## WHAT CAUSES CRANKCASE BREATHER HOSES TO FAIL?

Problems caused by any resulting leaks from the system can include the release of harmful emissions into the engine compartment and the atmosphere. A range of contributors to early hose failures have been identified. These include:

- **Deterioration of plastic connectors** used in hose construction
- **Cracks** caused by internal moisture and condensation
- **Clogging** by sludge from oil and carbon deposits
- **Soft rubber fittings that tear** and then leak
